Oynamic Bayesian Networks: Representation, Inference and Learning

by Kevin Petrick Murphy , 2002

"... Modelling sequential data is important in many areas of science and engineering. Fildden Markov models (HiMMs) and Kaiman filter models (KFMs) are popular for this because they are simple and flexible. For example, HMMs have been used for speech recognition and bio-sequence analysis, and KFMs have bee ...

The design and implementation of FFTW3

by Matteo Frigo, Steven G. Johnson - PROCEECINGS OF THE IEEE , 2005

"... FFTW is an implementation of the discrete Fourier transform (DFT) that adapts to the hardware in order to maximize performance. This paper shows that such an approach can yield an implementation that is competitive with hand-optimized libraries, and describes the software structure that makes our ou ..."

gSpan: Graph-Based Substructure Pattern Mining

by Xifeng Yan, Jiawei Han , 2002

. We investigate new approaches for frequent graph-based pattern mining in graph datasets and propose a novel algorithm called gSpan (graph-based Substructure pattern mining) , which discovers frequent substructures without candidate generation, gSpan builds a new texicographic order among graphs, and ..."
